ShopSense

Personalised Shopping Research Agent

Find the product that fits you, and see the proof.

The Problem

Product research is spread across search results, Reddit, videos and review sites. Reviews conflict or go stale, and generic “best of” lists ignore your budget and needs.

Our Solution

ShopSense turns one plain-language request into a ranked shortlist made for you, researched across many sources, with every claim cited, an honest confidence and where to buy.

Workflow

How we engineer it

1. Stakeholders
15 stakeholders, from shoppers to data platforms

2. Elicitation
28 functional, 17 non-functional and 10 domain requirements

3. User Stories
51 stories with acceptance criteria, in 6 EPICs

4. UML Modelling
Activity, sequence, class and state diagrams

5. Prototype
Working end-to-end skeleton, improved every sprint

Project Flow

What happens in one search

1. Describe
Your need in plain words: “laptop for coding under ₹70k”

2. Interview
A few smart questions about what matters to you

3. Research
Reddit, YouTube, reviews and search, in parallel

4. Verify & Rank
Match products, weigh sources, rank with confidence

5. Decide & Buy
Cited reasons, side-by-side compare, prices and links

Why ShopSense

- Every claim linked to its source
- Honest confidence, ties shown
- Asks only what matters
- Learns which sources to trust
- Never recommends an unsourced product
- Keeps working when a service fails
